

Draft Site 300 5-year review of East/West Firing Area Operable Units completed

The U.S. Department of Energy (DOE)/National Nuclear Security Administration has completed the draft second 5-Year Review of its environmental cleanup of the East/West Firing Area Operable Units (OU) 5 and 6 at Lawrence Livermore National Laboratory (LLNL)'s Site 300, located in the Altamont Hills between Livermore and Tracy, Calif.

This 5-Year Review report summarizes the nature and extent of contamination, and describes the progress of cleanup, at the East/West Firing Areas (OUs 5 and 6). The draft 5-Year Review report is available for public review at the Laboratory's Environmental Repository in the Tracy Public Library, 20 East Eaton Avenue, Tracy, CA 95377, [telephone (209) 835-2221]; the Laboratory Office of Government and External Affairs [(925) 423-3125]; and online at <http://enviroinfo.llnl.gov/cercla>. The 60-day review period begins on April 30, 2024.

The results of the 5-Year Review analysis will be presented in the final version of the document after concurrence by the U.S. Environmental Protection Agency and DOE. The results of the analysis will define how the remedies are protective of human health and the environment and any additional actions necessary to ensure protection of human health and the environment.

For full descriptions of OUs 5 and 6, cleanup objectives and remedies, see the full announcement in the [initial notification](#) on the LLNL [Environmental Stewardship and Occupational Health and Safety website](#).
