Lawrence Livermore To Conduct Site 300 Prescribed Burn

Lawrence Livermore National Laboratory will be conducting an annual prescribed burn at its Site 300 experimental test site south of the city of Tracy beginning approximately the week of May 12.

The burn will be performed by the Alameda County Fire Department under contract with Lawrence Livermore National Security, LLC, which manages the Laboratory for the U.S. Department of Energy/National Nuclear Security Administration.

The process for this protective activity will involve careful burning along the site fence line and in portions of the site interior under controlled conditions. The burn schedule is heavily dependent on appropriate weather conditions, which are confirmed by air district meteorologists on the day of a planned burn.

This year's prescribed burn plans, prepared for the Bay Area Air Quality Management District and San Joaquin Valley Air Pollution Control District, are available for viewing in the Tracy Public Library and on the [LLNL Environment, Safety & Health website](#) under Public Notifications.

For questions or more information, contact Scott Wilson in the Laboratory's Office of Government and External Affairs at 925-784-3534 or wilson101@llnl.gov.

Founded in 1952, [Lawrence Livermore National Laboratory](#) provides solutions to our nation's most important national security challenges through innovative science, engineering and technology. Lawrence Livermore National Laboratory is managed by Lawrence Livermore National Security, LLC for the U.S. Department of Energy's National Nuclear Security Administration.
